

Classer's Specification

IMPORTANT

These reports should be faxed progressively (for larger clips) or before the last consignment leaves the property (smaller clips). Receipt of the classer's specification, either prior to receipt of clip or with consignments (per carrier), ensures efficient handling or prompt test results.

The classer should indicate if shearing has been completed and if not which completed lines can be treated immediately.

Definitions		
1	Mulesing	The removal of skin from the breech and/or tail of a sheep using mulesing shears. <i>Source: Australian Animal Welfare Standards and Guidelines for Sheep (draft).</i>
2	Ceased Mulesing (CM)	Wool from sheep where the property has ceased mulesing. A mob may contain mulesed sheep; but no sheep born on this property in the last 12 months have been mulesed at the time of this shearing. There must be no intention to mules in the future.
3	Non Mulesed (NM)	All sheep in this mob <u>have not been mulesed</u> .
4	Pain Relief (PR)	All sheep in this mob have been <u>mulesed using a registered Pain Relief product</u> . Each mob must be declared separately. Note: The NWD definition for PR applies at the <u>mob level</u> , not at the <u>property level</u> .
