

Percentile Chart

A **percentile chart** measures the current price against the full range of the price over a period of time. i.e Select an indicator price and look to see where that particular indicator is in relation to the full range of the price movement over the period measured..

This is particularly useful when evaluating a **futures or forward** price.

Look also at the graphs elsewhere on the web site and they will demonstrate **when** various price levels have been achieved.

The composition of the NMI has altered over the period since March 1991 and the figure quoted reflects only that published by AWEX at the close of each week. The **Mean** is the average c/kg since cessation of the floor price scheme.

The **Median** is the middle c/kg level of all market data collected since cessation of the floor price scheme.
